

KAAGAZZ SECURE

Privacy by Design Solution

Discover sensitive information. Secure what matters. Preserve accountability.

From

Kaagazz Secure Digital Pvt. Ltd.

KAAGAZZ DISCOVER + KAAGAZZ SECURE

**KNOW WHERE YOUR
SENSITIVE DATA IS.**

**CONTROL WHO CAN ACCESS IT.
PROVE WHAT HAPPENED TO IT.**

Kaagazz Discover finds it. Kaagazz Secure protects it and preserves its history.

KAAGAZZ

DISCOVER

Find sensitive information
& surface risk

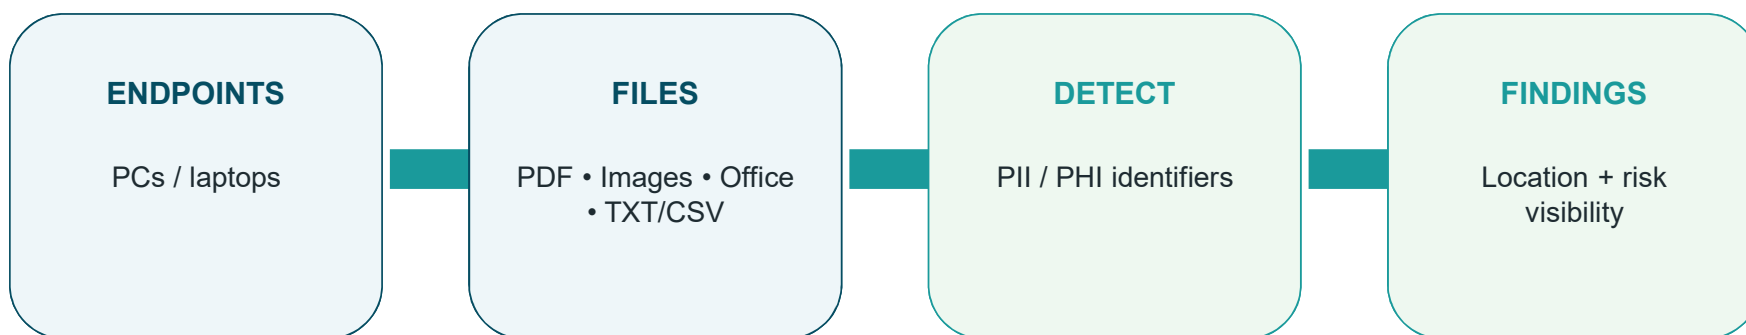

SECURE

Protect • Control • Trace

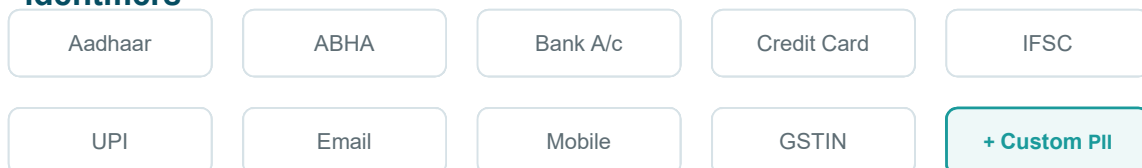

Kaagazz Discover — Make the Unknown Visible

Discover sensitive information across endpoints and common business files before it becomes an unmanaged risk.

Examples of supported Indian identifiers

DISCOVER answers:

Where is sensitive information present — and what has been found?

Kaagazz Secure — Protect the Document, Not Just the Perimeter

Once a sensitive document needs controlled handling, Kaagazz Secure applies document-level protection and governance.

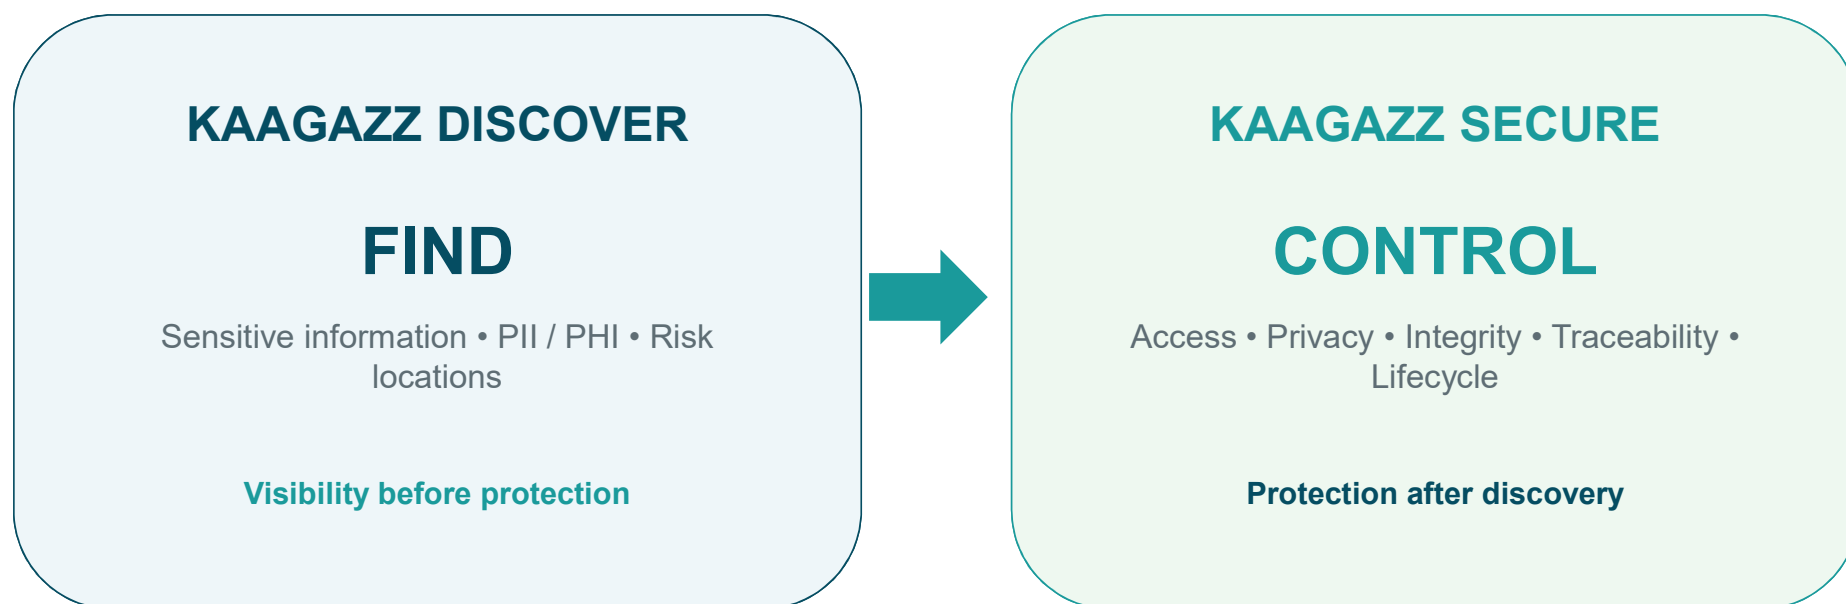

SECURE answers: Who can use the document, what can they do, and what happened to it?

One Connected Proposition — Discover + Secure

Two products. Two distinct jobs. One sensitive-information problem.

DISCOVER WHAT EXISTS. SECURE WHAT MATTERS.

When a Digital Document Becomes Evidence, Its History Matters

Kaagazz Secure is designed to preserve the activity and metadata needed for accountability and evidence readiness.

Security Capability That Also Supports Compliance

The Kaagazz Secure source deck maps document controls to privacy, accountability, lifecycle and digital-evidence requirements.

PRIVACY & DPDP

- Consent / purpose
- Role-based access
- Retention / removal

DOCUMENT GOVERNANCE

- Integrity controls
- Activity records
- Defined lifecycle

DIGITAL EVIDENCE

- Machine metadata
- Timestamps
- Hash information

The proposition is security first — with governance and compliance support built around the document.

Why Kaagazz Is Different

The value is not a single feature. It is the combination of discovery, document security and evidence-ready traceability.

1

DISCOVER

Find sensitive information across endpoints and files.

2

SECURE

Apply privacy, integrity, access and lifecycle controls.

3

PROVE

Preserve activity history and supporting evidence metadata.

A single conversation can move from “Where is the risk?” to “How is the document protected?” to “Can we prove what happened?”

DON'T TAKE OUR WORD FOR IT. LET US SHOW YOU.

Kaagazz Discover

See sensitive data discovery and findings.

Kaagazz Secure

See controlled access, document activity and traceability.

LIVE DEMO

- Discover PII / sensitive data
- Review findings & risks
- Secure a document
- Apply access controls
- Track document activity
- Review evidence metadata

**Kaagazz Discover + Kaagazz
Secure**
