

Kaagazz
Privacy by Design

CONSENT CONTEXT AND EVIDENCE

Kaagazz Consent

Capture consent with context. Retain evidence with clarity.

Kaagazz Consent helps organisations manage medical and non-medical consent while preserving the context needed to understand the consent record later.

THE OPERATING CHALLENGE

- Consent captured without enough context for later review
- Records separated from the information or process they support
- Difficulty demonstrating what was agreed and when

Discover - Secure - Govern - Comply

Kaagazz is designed as a connected information-governance platform. Each product addresses a focused need while supporting a wider privacy-by-design journey.

Core capabilities

Medical consent	Support consent records connected to healthcare contexts.
Non-medical consent	Support consent across wider organisational interactions.
Context preservation	Keep essential information connected to the consent record.
Governance connection	Link consent practices with document and information governance.

What this can help achieve

- Clearer consent records
- Better evidence for review and accountability
- More consistent consent-handling practices
- A practical connection between consent and information governance

A practical starting point	Start with one consent journey where context and evidence are difficult to reconstruct.
